# INTRODUCTION TO THE GLOBAL HOUSING MARKET

## A DIVE INTO THE GLOBAL HOUSING MARKET (2015-2024)

This presentation explores the changes of the global housing market from 2015 to 2024, highlighting key trends and shifts. By analyzing various indicators, I aim to provide insights into the factors influencing housing prices and affordability.

## OBJECTIVE AND INTRODUCTION

The objective of this analysis is to identify trends, patterns, and anomalies in the global housing market data. By understanding these trends buyers and researchers can better navigate the complexities of the housing market and make educated predictions for the market.

## A DIVE INTO THE GLOBAL HOUSING MARKET (2015-2024)

This presentation explores the changes of the global housing market from 2015 to 2024, highlighting key trends and shifts. By analyzing various indicators, I aim to provide insights into the factors influencing housing prices and affordability.

## OBJECTIVE AND INTRODUCTION

The objective of this analysis is to identify trends, patterns, and anomalies in the global housing market data. By understanding these trends buyers and researchers can better navigate the complexities of the housing market and make educated predictions for the market.

# MARKET ANALYSIS AND TRENDS

## IMPACT OF COVID-19 ON THE HOUSING MARKET

The COVID-19 pandemic significantly impacted the housing market, leading to a sharp decline in demand and a subsequent price drop. However, the market has shown signs of recovery, with prices beginning to stabilize and demand starting to pick up.

## CORRELATION BETWEEN KEY HOUSING FACTORS

The housing market is influenced by various factors, including interest rates, employment, and economic growth. Understanding the correlations between these factors is crucial for predicting market trends.

## TOP 10 COUNTRIES WITH HIGHEST HOUSING PRICES

Several countries consistently rank high for housing prices, including Switzerland, Norway, and Australia. These markets are characterized by high demand, limited supply, and strong economic performance.

## MORTGAGE RATES OVERVIEW (2015-2024)

The volatility of mortgage rates over the past decade has been a significant factor in housing market activity. Rates have fluctuated between 4% and 6%, with a notable peak in 2022.

## HOUSE PRICE INDEX VS RENT INDEX

The relationship between house prices and rent is a key indicator of market health. While house prices have shown a steady increase, rent has also risen, though at a slower pace.

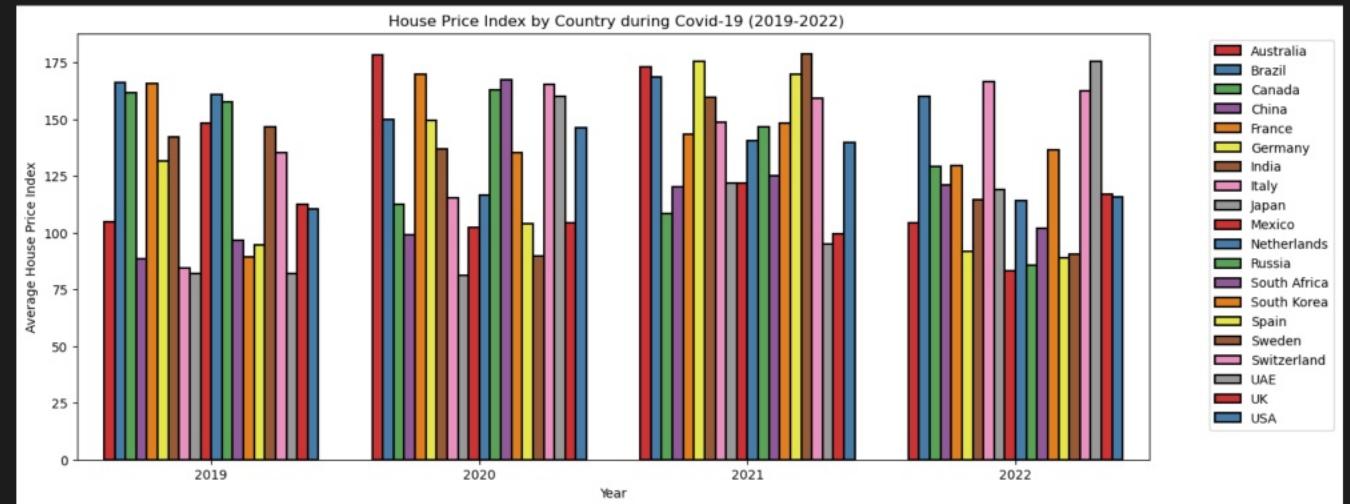

## AFFORDABILITY TRENDS OVER TIME

The affordability of housing has become a major concern for many households. Over time, the gap between income and housing costs has widened, making it increasingly difficult for many to afford a home.

# IMPACT OF COVID-19 ON THE HOUSING MARKET

The COVID-19 pandemic significantly impacted the housing market, leading to a sharp increase in the average House Price Index across various countries. This surge was primarily driven by low mortgage rates and changing lifestyle preferences due to remote work.

House Price Index by Country during Covid-19 (2019-2022)

# CORRELATION BETWEEN KEY HOUSING FACTORS

The heatmap reveals strong positive correlations between the House Price Index and Rent Index, indicating that rising house prices often lead to increased rent prices. Additionally, a positive correlation exists between the Affordability Ratio and Mortgage Rate, suggesting that higher mortgage rates can negatively impact housing affordability.

# TOP 10 COUNTRIES WITH HIGHEST HOUSING PRICES

From 2015 to 2024, Switzerland, Brazil, and the Netherlands consistently reported the highest housing prices. Possibly due to the fact that they have strong housing demand and but limited supply. This trend highlights the importance urbanization in determining housing costs.

# MORTGAGE RATES OVERVIEW (2015-2024)

The majority of mortgage rates during the 2015-2024 period clustered between 2% and 6%, with a notable peak around 4.5%. This distribution indicates that low mortgage rates played a crucial role in driving up housing prices globally.

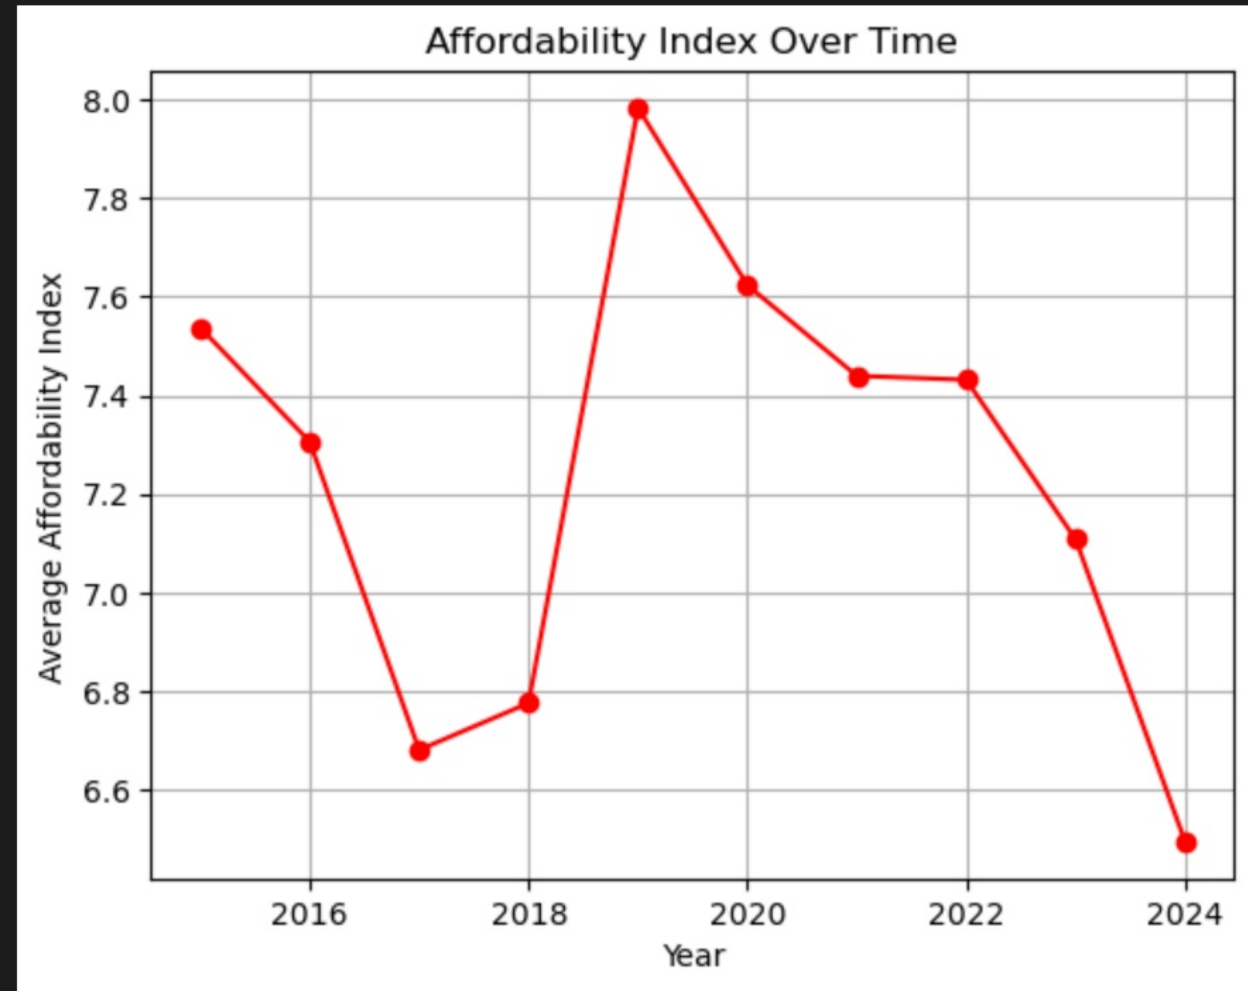

# HOUSE PRICE INDEX VS RENT INDEX

The scatter plot comparing the House Price Index and Rent Index illustrates a positive relationship, where increasing house prices correlate with rising rental prices. However, the spread of data points suggests that this relationship varies significantly by country.

# AFFORDABILITY TRENDS OVER TIME

The line plot depicting the Affordability Index over time reveals significant trends, particularly the spike in affordability issues from 2018 to 2020. Post-2022, the data indicates a stabilization in affordability, suggesting a return to more predictable market conditions.

## CONCLUSION AND INSIGHTS

The analysis gives a glimpse of the importance of understanding the relationships between key housing factors and their influence on the market. We found significant trends, particularly in the decline in affordability and the correlation between housing costs and mortgage rates. Understanding these relationships is crucial to better navigate the housing market and make educated predictions for the market in the future.

Thank you for your  
attention!
